DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 6/14/06 has been entered.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 6/14/06 was filed after the mailing date of the Notice of Allowance on 4/17/06, but before payment of the issue fee. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

3. Claims 1-64 are allowable over the prior art of record.

Art Unit: 2626

4. The following is an examiner's statement of reasons for allowance:

As per independent claims 1,28,33,60, the recited limitations pertaining to combining the residual signal with a first noise feedback signal and predictively quantizing the predictive quantizer input signal is not explicitly taught by the prior art of record. Furthermore, it would not have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of the prior art of record to obtain the recited limitations of the independent claims as noted above. With respect to the prior art of record, Bhaskar (5487086) teaches a method of predictive coding (col. 4 lines 10-21) using residual predicting (col. 4 lines 10-16), as well as disclosing older well known noise feedback systems (col. 2 lines 55-67, Fig. 1; i.e., noise feedback systems are indeed old and well known in the art; also Yong (5195168) – Fig. 1; Swaminathan et al (5734789) – Fig. 19; Gao et al (6104992) – Fig. 2; Mermelstein (6249758) – Fig. 3); however, Bhaskar teaches an "open loop" codec structure that is specifically designed to avoid the use of a noise feedback loop or noise feedback signal. Moreover, none of the structures described in Bhaskar's codec, alone or in combination with each other, perform the step of combining the residual signal with a first noise feedback signal to produce a predictive quantizer input signal in the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
